TUMI STAKES EXTENSION TO THE VITTURN BASE METAL CLAIM, SWEDEN

Vancouver, Canada – Tumi Resources Limited (the “Company”) (TSXv-TM; OTCBB – TUMIF; Frankfurt - TUY). David Henstridge, President, announces the acquisition, through staking, of the Vitturn Nr 3 (113 hectares) exploration permit within the Bergslagen Mining District of south-central Sweden. The Vitturn Nr 3 claim application has been granted for an initial three year period by the Swedish Mining Inspectorate. This new claim extends further west the area already held by the Company.

When reviewing the data collected from the induced polarisation (IP) survey that was completed in May 2008 (see news release dated June 3rd, 2008) a NNE-SSW striking trend of increasing chargeability and decreasing resistivity was detected at the NW corner of the surveyed area. The strike of this anomaly coincides with the recent discovery on Lundin Mining’s Tvistbo claim which abuts the Vitturn claims to the south. Lundin Mining has completed geophysical surveys and drilling and has publicly stated that they have intersected resource-grade sulphide mineralization on their property. The chargeability anomaly map of the Vitturn area may be viewed on the front page of the Company’s website www.tumiresources.com.

Mr Henstridge stated: “The discovery of the previously unknown 400m long IP and resistivity anomaly on the eastern flank of the Stollberg synform, together with Lundin Mining’s discovery along strike from the anomaly in the NW corner of our surveyed area, makes this a prime target for a follow-up IP survey which will be organized as soon as possible.”

The qualified person for Tumi’s projects, David Henstridge, has visited the Vitturn project in the Bergslagen District of Sweden and has verified the contents of this news release.

On behalf of the Board,

“David Henstridge”

David Henstridge, President & CEO
