News Release

August 25, 2005

Tumi Commences Geophysical Survey at La Trini, Mexico

Vancouver, Canada – Tumi Resources Limited (the “Company”) (TSXv-TM; OTCBB – TUMIF; Frankfurt - TUY).

Mr. David Henstridge, President, is pleased to announce that the Induced Polarization and Resistivity Survey (the “Survey”) to be undertaken at La Trini Silver-Gold Prospect has now commenced. The Survey, which is expected to take two weeks to complete, will consist of ten line-kilometres covering an area of about 1,400 metres by 600 metres on the grid recently established by the Company.

Silver-gold mineralization at La Trini occurs within a gently northerly-dipping silicified rhyolite containing disseminated pyrite and argentite. The Induced Polarization survey should help in tracing the mineralization beyond its currently known limits, both down dip and along strike from the existing surface showings, underground workings and drill holes.

The qualified person for La Trini project, David Henstridge, a Fellow of the Australian Institute of Mining and Metallurgy and a Member of the Australian Institute of Geoscientists, has visited the La Trini project area and has verified the contents of this news release.

On behalf of the Board,

“David Henstridge”

David Henstridge, President & CEO
