TUMI COMPLETES AIRBORNE EM SURVEY ON THREE LICENCE AREAS IN SWEDEN

Vancouver, Canada – Tumi Resources Limited (the “Company”) (TSXV-TM; OTCBB – TUMIF; Frankfurt - TUY). Mr David Henstridge, President, announces the completion of a helicopter-borne electromagnetic (EM) and magnetic survey over three of the Company’s 100% owned mineral exploration licences located in the Bergslagen District, Sweden. This program is a continuation of Tumi’s regional exploration work in the Bergslagen area, seeking undiscovered silver and base metal deposits. EM surveys undertaken last year helped define drill targets at Sala and Tomtebo and have proved to be a useful tool in identifying new exploration targets. Approximately 400 line kms of survey were flown over the Blixbo, Krusbo and Stollbergsgruvan areas with a flight line spacing of 100 m. The survey was undertaken by Skytem of Denmark.

Blixbo (581 Ha.) Located 17 km east of the town of Falun. A historical sample taken by Boliden from an outcrop in a road-cut assayed 33.8% Zn, 0.8% Pb, 0.4% Cu, 175 ppm Ag, 0.4 ppm Au and 0.4% W. Two channel samples taken by Tumi verified this high result. One of them, a 1.5 m wide channel sample, assayed 21.4% Zn, 1.8% Pb, 1.3% Cu, 131 ppm Ag and 2.3 ppm Au. The Blixbo area is underlain volcanics known to contain mineralization elsewhere in the Bergslagen District.

Krusbo (2482 Ha.) Located 7 km west of Falun. Several old workings are found in a WSW-ENE striking metarhyolite with K-Mg-Si alteration of the same type that has been found around the historic copper mine of Falun. The survey covered the extent of metarhyolite within the licence area.

Stollbergsgruvan (773 Ha.) Covers the southern part of the historic Stollberg ore field which contains more than 25 volcanic massive sulphide deposits along a 4 km long manganese-rich horizon. Deposits are described as “massive sphalerite-galena with high silver grades.” The survey covered the known extent of the mineralized horizon underlying the licence area.

The results of the three surveys will be interpreted by Skytem and will be forwarded to the Company in several weeks time. Any EM anomalies discovered by the survey will be followed up in the field for possible causes.

The qualified person for Tumi’s projects, David Henstridge, has visited the Krusbo, Blixbo and Stollbergsgruvan licences in the Bergslagen District, Sweden, and has verified the contents of this news release.

On behalf of the Board,

“David Henstridge”

David Henstridge, President & CEO
